

RUSNANO

PRESS RELEASE

09/06/2017

Over the period of three years, more than 10,000 persons passed examination in PET-center in Ufa

The center in Ufa started reception of patients in March 2014 and became the first center commissioned by RUSNANO's portfolio company "PET-Technology". For three years of operation more than 10,000 persons passed PET/CT-diagnostics of oncological diseases. As of June 2017, more than 41 thousand persons were checked up in the federal network.

According to the statistics, the number of oncology patients in Russia is increasing by half a million persons every year. The technology of PET/CT-scanning (positron emission tomography coupled with computerized tomography) allows to detect cancer at early stages, when the patient has a chance of complete recovery.

PET-center of "PET-Technology" in Ufa is located in the territory of one of the largest specialized oncologic dispensaries in Russia, which for the period of its existence has provided assistance to many thousands of patients suffering from virtually any types oncological diseases.

"A great work has been done during three years from the moment of opening of the center in Ufa. The residents of the Republic of Bashkortostan and the Volga Federal District gained access to high-tech medical aid in the form of diagnostics and treatment of oncological diseases. The center rendered assistance to tens of thousands persons. These are not just dry figures for us – these are saved lives. This is not only our merit; we would not achieve that result without support of local doctors and regional authorities. We hope that we will keep the pace in future" noted the managing director for the investment activity of the Management Company RUSNANO, **Olga Shpichko**.

"It took "PET-Technology" just a few years to create the network of nuclear medicine centers and become the leader in the sphere of diagnostics opportunities of nuclear medicine. The Ufa center was the first center, which started reception of patients in 2014. We are grateful to the administration of the Republic of Bashkortostan for its all-round support in organization, creation and operation of the center of nuclear medicine in Ufa. Only through joint efforts we can change the lives of tens of thousands of oncologic patient that need modern diagnostic techniques" said the General Director of "PET-Technology", **Diana Kobesova**.

In-house production of radiopharmaceuticals used in diagnostics, quality control laboratory, modern PET/CT-scanner and the high level of training of specialists guarantee precision and accuracy of the examination.

"We successfully diagnose tumors that can hardly be diagnosed by other diagnostic techniques. The majority of our patients have neoplasms in lungs, brain, mamma, prostata gland and lymphomas" says radiotherapist, radiologist of the Ufa center, **Guzel Muslyumova**.

Patients can pass diagnostics in the PET-center in Ufa under the Program of State Guarantees of Free Medical Aid to Citizens, voluntary medical insurance programs or at their own expense.

Currently, the federal network of "PET-Technology" includes eight PET-centers located in Moscow, Ufa, Ekaterinburg, Lipetsk, Belgorod, Tambov, Kursk and Orel. As of June 2017, more than 41 thousand persons were checked up in the federal network.

***Joint-Stock Company RUSNANO** was founded in March 2011 following the re-organisation of the state corporation "Russian Corporation of Nanotechnologies." RUSNANO supports the state policy for the development of the nanoindustry by investing in financially-viable high-tech projects and creating new industries in Russia directly or via nanoindustry investment funds. Main investment areas are: electronics, optronics and telecommunications, health care and biotechnology, metallurgy and metal processing, energy, mechanical and instrumentation engineering, construction and industrial materials, chemicals and petrochemicals. 100 percent of the shares of RUSNANO are owned by the state. Thanks to RUSNANO investments, there are currently 84 factories and R&D Centers open in 30 regions in Russia.*

Asset management of RUSNANO is carried out by Limited Liability Company "Management Company RUSNANO" that was created in December 2013. The Chairman of its Management Board is Anatoly Chubais.

The tasks of establishing nanotechnology infrastructure and educational programs are carried out by the Fund for Infrastructure and Educational Programs that was also founded following the re-organisation of the state corporation. More information can be found at www.rusnano.com
